

Nova Conference on CO₂-based Fuels & Chemicals, March 2022

Title:

Development of CCU in Europe: Projects and Policies

Author:

Anastasios Perimenis

Abstract:

We are currently witnessing an unprecedented effort to make EU's policy framework fit to foster the achievement of the declared goals of the European Green Deal. During the last years, Carbon Capture and Utilisation (CCU) has evolved from being only an emerging concept to constituting a recognised solution to reach our goals. CO₂ Value Europe will provide an overview of the most important policy instruments and explain how decisive they will be towards a large scale deployment of CCU technologies by 2030. It will also present for the first time in public its database of ongoing, upcoming and recently finished CCU projects, an instrument that will help stakeholders understand the CCU landscape better and improve collaboration.
