

CO2-based Fuels and Chemicals Conference 2025

Jarkko Toropainen

Senior Manager, P2X Business Development

About the presentation: *Harnessing the Power of the Nordics: Fortum's Unique Position for Boosting Electrification and Use of Sustainable Carbon Sources*

The Nordic countries have very good possibilities to launch large scale P2X industry leaning on vast biogenic carbon sources and affordable renewable power production possibilities. With our resources, we can help Europe to build more sustainable and resilient energy and material ecosystems.

Fortum is having a key role in developing new clean electricity production in the Nordics and enabling industry to de-fossilize the processes in the future. Together with the most largest biogenic carbon sources i.e. Nordic forest industry we can form a solid basement for Europe to source more sustainable hydrocarbons and energy in the future.
